Art Unit: 2183

1. Claim 1 is presented for examination.

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claim 1 is rejected under 35 U.S.C. 103(a) as being unpatentable over Park et al.

(5,881,307) in view of Woffinden et al. (5,095,424).

3. As to claim 1, Park disclosed a system including at least :

a) detecting a first instruction in a first memory location including a syntax for computing an effective address (e.g. see the effective addresses of up to four instructions in col.6, lines 36-51);

a) detecting a second instruction in a first memory location including a syntax for computing an effective address (e.g. see the effective addresses of up to four instructions in col.6, lines 36-51).

4. Park did not specifically teach the determination of the relationship between the first and second memory locations in response the first instruction syntax and second instruction syntax as claimed. However, Woffinden disclosed a system including a table for referencing the relationship between system and effective addresses (e.g. see col.6, lines 20-52). It would have been obvious to one of ordinary skill in the art to use Woffinden's address table in Park for

determining the relationship of the effective addresses as claimed because the use of Woffinden could expand the capability of the effective address calculation in Park to adapt to predetermined requirements of the address structure, such as specific relation of a given address range, and it could be done by defining the address table of Woffinden into Park with modified configuration variables, such as address type, address format, such that the relationship of the effective addresses of Woffinden's address table could be recognized by Park, and because one of ordinary skill in the art should be able to recognize the comparison of the newly issued effective address with the address queue (see col.6, lines 52-67) would need the use of an address construct, such as a table for determining the relative length of a given address range for purpose of removing the data dependencies, and in doing so, provided a motivation.

5. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Daniel Pan, Esq. whose telephone number is 703 305 9696. The examiner can normally be reached on M-F from 8:00AM to 4:00 PM.
